Uses a clear, concise title that is easily understood by a broad audience.

Objective of the project is explicitly stated (but could have used a more informative header).

Simple, informative figures highlight the major results from computation and simulations. The figures do not try to pack too much information into each panel.

This poster is a good example of using a minimum amount of text while still effectively communicating main ideas.

It is designed with the understanding that it requires the presenter to explain further technical details.

Thank you to Mar Vaquero for use of this poster.

Listing PI first is a formatting requirement for this JPL poster session.

Major significance of the work is clearly stated alongside visual data that highlights the project’s improvement on existing methods.
